

## VACANCY

### Controls Engineer

We currently have a vacancy for a Controls Engineer within the production engineering team. The successful candidate will be responsible for the maintenance and development of all factory control systems.

This will involve supporting all electronic, PLC and software systems within the manufacturing department including systems such as electronic standard operating procedures, automated data farming, visual inspection and assembly automation. You will be responsible for the programming of all new PLC's and developing new IT based assembly and test systems.

We are looking for someone qualified to at least HNC level in electronics with experience of PLC programming together with signal processing or data acquisition software tools.

If you wish to be considered for this position, please apply in writing by submitting an up to date CV to reach the HR department.
