

## VACANCY

### Materials Process Analyst and Controller

The Material Systems Analyst & Controller will be responsible for the purchasing of Materials from Kawasaki Heavy Industry (KHI) and other Kawasaki Group Members. Ensuring material availability to meet customer demand including New Product Introduction, production planning and other project requirements.

Support localisation projects involving bringing in/switching off component supply from KHI to a local supplier.

Tight control and implementation of new procedures to support the business in achieving streamlined, transparent material visibility, using SAP.

Responsible for the ordering of components, monitoring the adherence to lead-times, supplier delivery performance, as well as safety stocks, stocking strategies and ensuring delivery dates from the supplier are confirmed. The position involves liaising with suppliers and other departments within the business, supporting them, while working to achieve individual departmental targets and goals in support of KPM's revenue and inventory targets and operation's goals for on-time customer order fulfilment.

Working together with the material planning team the role will be integral in developing and implementing business system changes and stocking strategies to meet the future goals of the business.

The role will require interaction and consultation with other business areas to ensure any system changes/updates in their departments do not impact materials systems or to work to resolve any impacts in the best interests of the business.

The successful applicant should possess the following skills and experience:

- Knowledge and experience of material control processes ideally SAP
- Strong analytical statistical and computer skills ideally SAP
- Excel knowledge using formulae, pivot tables, and running macros
- Excellent communication skills and a strong customer focus
- Material procurement with urgency and accuracy
- Experience in supply and manufacturing
